

**Bio:**

Dr Axel Jahn is Managing Director of TriaGnoSys, the expert in mobile communication, information and media, enabling communications and information transfer to and from the air, using satellite, air to ground and other radio links, to connect communication networks through its cutting-edge mobility routers.

Before founding TriaGnoSys, Axel worked at DLR, the German Space Agency. He has been at the forefront of the development of picocell-based satellite backhauling. TriaGnoSys solutions are used for a range of commercial applications, including the provision of GSM/GPRS services on commercial aircraft, cruise ships, container tracking and for military and emergency use.

TriaGnoSys is also involved in a wide range of research projects, focusing on a broad range of mobile satellite communication areas in conjunction with leading academic, government and industry researchers to advance the state of the art in such areas as mobile end-to-end solutions, next generation satcom and aircom, and combined navigation/communications applications and technologies.

Axel lives near Munich and is married with two daughters.
