

SOLID STATE

Booth #6.1B31 in the IFE Zone

Solid State has launched an innovative, next-generation iPad-based IFE solution designed to meet airlines' evolving IFE needs. We have taken all we have learned from previous iPad-based solutions, the latest in iOS advancements and our experience with mass deployments to deliver a zero-touch, end-to-end solution; making this the most flexible and reliable iPad-based IFE product on the market.

Early Window Content

As a Hollywood-approved early window content provider, Solid State can work with your CSP to deliver the latest Hollywood movie and TV content to your passengers. As well, Solid State offers a full suite of international magazines available natively within our application, and of course the latest and greatest App Store Games to keep your passengers entertained throughout their flight.

Customization Features

Every device features a beautiful, customized design based on your carrier's branding and specific user experience requirements. And Solid State can provide more. *Need a moving map? Want to allow customers to order duty-free from their seat?* Solid State's world-class developers can develop a custom designed solution to meet your specific requirements, or we can integrate with any existing third-party solution.

Improved Passenger Experience

Solid State's user interface is easy-to-use and can be adjusted to ensure that all customers can enjoy the IFE experience. Solid State's application offers multiple accessibility options such as light/dark display, bold text and Apple's VoiceOver feature to help hearing and visually impaired passengers enjoy the most inclusive onboard IFE experience in the industry.

Remote Updates & Content Management

Solid State Inflight's IFE solution has a sophisticated back-end content management system that enables seamless, remote content updates, which can be delivered monthly, weekly, daily or even at the last minute – providing airlines with the greatest flexibility possible. All updates can be managed remotely by Solid State's team, ensuring that the deployment of new updates is a completely hands-off experience for airlines.

Full-Service Model

Solid State can provide both purchase and lease options for the iPad hardware and will handle implementation of a full, turnkey IFE solution. Through its partnership with In Flight Solutions, Solid State is the only IFE provider that offers full ground handling and on-site logistics support, all for one low, per-device flat fee. Along with iPads, Solid State also provides the latest ground carts and Atlas cart solutions through our partner LocknCharge Technologies, and all additional infrastructure necessary to effectively implement an iPad-based IFE solution.

Analytics Information

Solid State delivers as standard, a detailed set of usage statistics that clearly details passenger viewing habits, including movie, TV and audio hits, along with actual page views for magazines and other printed materials. We can even feed this information back into our app giving passengers a list of the most popular choices as viewed by other passengers. This powerful tool lets our airline customers better tailor their IFE experience for maximum customer satisfaction.
